

MAP-2026-001

Quote to order — custom bracket

Quote to order · Owner D. Whitfield · Sales Operations · Northfield plant · Created Aug 12, 2026 · Updated Aug 17, 2026

STATUS
Complete

SCOPE

Starts with	Customer sends an RFQ with a drawing
Ends with	Customer receives an order acknowledgment
Display unit	hours

LANES

Customer (customer) Sales (department) Estimating (role)
Engineering (department) Order Entry (role)

CURRENT-STATE MAP

Current state — MAP-2026-001 Quote to order — custom bracket · steps 1-6 of 15

Current state — MAP-2026-001 Quote to order — custom bracket (continued) · steps 7–10 of 15

Current state — MAP-2026-001 Quote to order — custom bracket (continued) · steps 11-15 of 15

METRICS

Lead time	9 d 6 h
Touch time	6 h 30 min
Waiting	8 d 23 h 30 min
Process cycle efficiency	2.9%
Value split	VA 4 h · NNVA 1 h 35 min · NVA 9 d 25 min
Handoffs · rework loops	6 · 1
Steps with unknown time	0 of 15

WAITS AND HANDOFFS

- 4 d before Quote accepted? (Customer)
 - 2 d before Engineering reviews manufacturability (Engineering)
 - 1 d before Sales reviews and sends quote (Sales)
 - 16 h before Estimating builds cost model (Estimating)
 - 8 h before Sales logs RFQ in CRM (Sales)
- Handoff Customer → Sales at “Sales logs RFQ in CRM” — trigger: Daily inbox sweep, then 8 h wait
- Handoff Sales → Engineering at “Engineering reviews manufacturability” — trigger: no trigger recorded, then 2 d wait
- Handoff Engineering → Estimating at “Estimating builds cost model” — trigger: Email from Sales, then 16 h wait

folder, then 1 d wait

Handoff Sales → Customer at “Quote accepted?” — trigger: Quote email, then 4 d wait

Handoff Customer → Order Entry at “Order Entry re-keys quote into ERP” — trigger: PO email forwarded, then 8 h wait

PAIN POINTS AND INVESTIGATIONS

Medium

Waiting

RFQs sit in the shared Sales inbox until the daily sweep. Two RFQs last month were found three days late. — at “Sales logs RFQ in CRM”

High

Quality

Manufacturability review does not check drawing tolerances against fixture capability. The BR-2210 oversize hole surfaced in production, not at quote. — at “Engineering reviews manufacturability”

High

Rework

Quote is re-keyed into ERP by hand. Two order errors last month traced to typos in quantity and revision. — at “Order Entry re-keys quote into ERP”

FUTURE-STATE MAP

Future state — MAP-2026-001 Quote to order — custom bracket (continued) · steps 7–10 of 10

Rework loops	1	1	no change
Steps with unknown time	0	0	no change

CHANGE RATIONALE

- Removed:** Sales logs RFQ in CRM
Portal submission creates the CRM record automatically. No one has to sweep an inbox.
- Removed:** Sales checks drawing completeness

Removed: Engineering returns notes to Sales

Engineering notes live on the RFQ record; Estimating sees them the moment the review is marked done.

Removed: Order Entry re-keys quote into ERP

The ERP sales order is created from the accepted quote record. Nothing is re-keyed, so the typo errors cannot happen.

Removed: Order Entry confirms order to customer

The portal sends the acknowledgment automatically when the ERP order exists.

Changed (name, system): Customer submits RFQ in portal with drawing

The portal captures the required fields and the drawing up front, so nothing bounces back for missing information.

Changed (laneId, waitBeforeMin, trigger): Needs engineering review?

Estimating triages the queue twice a day and routes to Engineering directly; Sales no longer relays.

Changed (waitBeforeMin, system, trigger): Engineering reviews manufacturability

Engineering runs a 15-minute daily triage of the review queue. The two-day wait was queue time, not review time.

Changed (waitBeforeMin, trigger): Estimating builds cost model

Estimating is notified from the queue instead of email, so work starts the same half-day.

Changed (name, laneId, cycleTimeMin, waitBeforeMin, system, trigger): Quote sent to customer from quote tool

Sales approval is required only above \$25k. Standard quotes go out from the quote tool, which removes a handoff and a one-day wait.

Changed (waitBeforeMin, trigger): Quote accepted?

The quote carries a 48-hour follow-up and a one-click accept in the portal. Customer decision time is theirs, but the follow-up halves it in the pilot.

Changed (name, cycleTimeMin, waitBeforeMin, system, trigger): Customer accepts quote in portal (creates PO)

Acceptance in the portal is the PO. No separate PO email to wait for.

Changed (name, laneId): Order acknowledged automatically

Acknowledgment is a system event the customer sees in the portal, not an Order Entry task.
